

## Applied Physics Curriculum Map

(effective Fall 2016 and after)

The curriculum map provides insight and direction for students to graduate in four years. With the assistance of a student's academic advisor and department chairperson, the map will provide a guide between what should be taken term by term and where the student is with respect to grades received in courses. Milestones are noted on the map and serve as hints regarding what courses and/or activities must be completed that term. Please note that every term does not have a milestone. Prerequisites are also noted providing the student and his/her advisor a true indication of where the student falls within the curriculum. In this particular document, key prerequisites are listed that can prevent a student from moving along in the curriculum if not met. Also, note that the Department of Physics only considers the grade of "C" or higher as meeting the prerequisite. A grade of "C" or better is required in each course in physics taken for credit for a major or a minor in physics.

Students completing the applied physics program will be prepared for employment in the government sector, private industry, or graduate studies in physics. Physicists outside of academia work within the fields of astronomy and space exploration, climate study, medicine, national security, robotics, animated films, and finance. Students in this major must have a passion for understanding the laws of nature and a desire to apply them to real world practices, thinking critically, and be extremely motivated and self-disciplined.
